INTRODUCTION

Bees on BSC is a token created on May 15th from the idea of safeguarding the lifeblood of our planet — bees.

Many animals are at risk of extinction, but we must not forget that human life also depends on the help of these now endangered creatures.

The International Union for the Conservation of Nature has recorded declines in bee populations in Europe, Asia and South America.

For this reason, Bees on BSC aims to guarantee the sustenance of bees and raise awareness of their importance by contacting the major organizations for the protection of bees and contributing with donations and volunteering in the most affected regions.

WHAT IS BEES ON BSC?

Bees on BSC is a hyper deflationary Token based on Binance Smart Chain model, and according to the following criteria, every time Bees is bought, sold or traded there is a 8% flat fee:

- **3% redistributed to holders.**
- **4% burned forever.**
- **1% Devs Public Wallet for charitable actions, marketing and listing on other important exchanges. The Devs Wallet will always be available for consultation by the community in order to make the token safe and reliable.**

*** 20% supply already burned to the "dead" address.**

SUPPLY

It was born with a supply of 1,000,000,000,000,000 and was made a sequent burn of 20% of the token. Therefore, there are currently less than 692,000,000,000,000 tokens in circulation. At the time of writing, 31% of the total tokens have been burned.

Simply keep your BEE tokens in one of the following wallets: MetaMask, Trust Wallet, Binance Smart Chain Wallet. Earn reflective tokens every time someone buys, sells or trades BEE tokens.

TOKENOMICS

Symbol: **BEE**

Total Supply: **1.000.000.000.000.000**

Token Burned: **28% BlackHole**

Adress: **0x00dead**

LP: **Locked Forever**

BEE STATS AS OF 5/18/21:

- **701 holders**
- **6,769 transactions**

BEES ON BSC FUTURE

During the first weeks from launching the token we will strive to reach a very large audience through sponsorships and contests.

Our goal is to be listed on CoinMarketCap and CoinGeko and then to focus on paid exchanges. We want to make it as easy as possible to buy the BEE token.

Listing on exchanges and sponsorships will be of vital importance initially, which will allow our focus shift onto our charitable action goals.

The contract will not be rejected in order to be able to carry out requests for audits with the possibility of making changes if these are deemed necessary in order to lay solid foundations. Another manual burn could be possible in future following the development of our token and will of the community driving the scarcity of remaining BEE tokens.

To make the token reliable we decided that once the preparations are complete, we will make personal presentations showing our faces. We know this action is vital for the token's well-being and investor confidence.

By the end of May 2021, we aim to carry out an official AMA order to be able to interact with the beating heart of our project, our community.

In the coming weeks, therefore, our goal will be to seek growth opportunities suited to our needs and possibilities and to carry out the first aid in the field for the well-being of the planet.
